## **Aufgabe 1987 4c:**

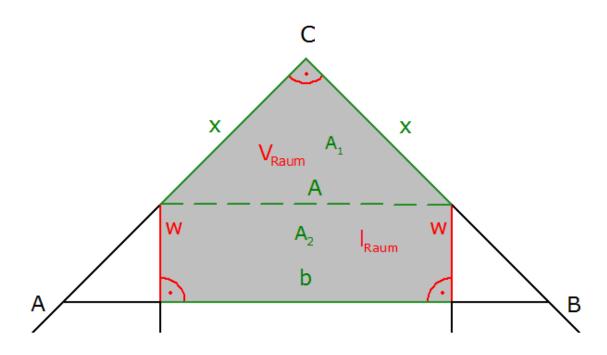

3 P

### Strategie 1987 4c:

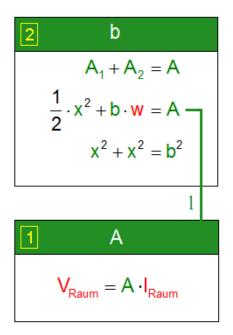

### **Gegeben: Gesucht:**

### Skizze:

## Strategie 1987 4c:

### **Struktogramm:**

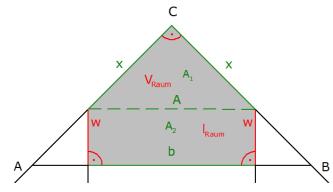

## Lösung 1987 4c:

# 1. Berechnung der Dachausenfläche A:

$$V_{\text{Raum}} = A \cdot I_{\text{Raum}}$$

$$A \cdot 4,80 = 150$$
 |: 4,80

$$A = 31,25 \,\mathrm{m}^2$$

#### 2. Berechnung der Strecke b:

$$\underline{A_1} = \frac{1}{2} \cdot x \cdot x = \underline{\frac{1}{2} \cdot x^2}$$

$$A_2 = b \cdot w$$

$$A_1 + A_2 = A$$

$$I: \frac{1}{2} \cdot x^2 + b \cdot w = A$$

$$x^2 + x^2 = b^2$$

Pythagoras im rechtwinkligen

$$2 \cdot x^2 = b^2$$

|:2

II: 
$$x^2 = \frac{b^2}{2}$$

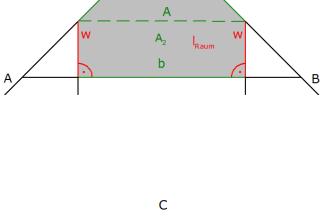

Einsetzen II in I

$$\frac{1}{2} \cdot \frac{b^2}{2} + b \cdot w = A$$

$$\frac{1}{2} \cdot \frac{b^2}{2} + b \cdot 1,50 = 31,25$$

$$\frac{1}{4} \cdot b^2 + 1,50b = 31,25$$
 |  $\cdot 4$ 

$$b^2 + 6b = 125$$

## Lösung 1987 4c:

$$x^2 + px + q = 0$$

p und q bestimmen

$$q = -125$$

$$X_{1,2} = -\frac{p}{2} \pm \sqrt{\frac{p^2}{4} - q}$$
 Lösungsformel

$$X_{1,2} = -\frac{6}{2} \pm \sqrt{\frac{6^2}{4} - \left(-125\right)}$$

$$x_{_{1,2}}=-3\pm\sqrt{\frac{36}{4}+125}$$

$$x_{1,2} = -3 \pm \sqrt{9 + 125}$$

$$x_{1,2} = -3 \pm \sqrt{134}$$

$$X_{1,2} = -3 \pm 11,58$$

$$X_1 = -3 + 11,58 = 8,58$$

$$x_2 = -3 - 11,58 = -14,58$$
 keine Lösung, da negativ

$$b = 8,58 \, m$$
